

Fund Objective

The objective of the portfolio is to provide investors with a regular and stable income that targets inflation beating returns over the long term, while actively managing risk of capital loss in the short term.

Fund Strategy

Investments to be included in the portfolio will, apart from assets in liquid form, consist of equity and non-equity securities, fixed interest instruments (including but not limited to bonds, cash deposits and money market instruments), debentures, preference shares and property securities as well as any other income enhancing securities which are consistent with the portfolio's primary objective and that the Act may allow from time to time. The portfolio's equity exposure will be limited to a maximum of 10% of the portfolio's net asset value. The manager may also include any forward currency, interest rate and exchange rate and exchange rate swap transactions for efficient portfolio management purposes. The portfolio will be managed in accordance with regulations governing pension funds.

Fund Information

Maximum Annual Advice Fee	1.14
Manager Annual Fee	0.96
Total Expense Ratio	1.24
Transaction Cost	0.02
Total Investment Charges	1.26
Performance Fee	—
TER Measurement Period	1 January 2015 - 31 December 2017

The manager decreased the annual management fee on 1 October 2017 to 0.96% from 1.14%.

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

The Northstar Sanlam Collective Investments Income Fund transitioned to Sanlam Collective Investments (RF) (Pty) Ltd on 08 September 2017.

Risk Profile

Conservative

You prefer to receive stable income flows and are determined to keep your capital intact at all times. You understand that comfort means that you may not receive outsize returns but that your capital will be safe — and the likelihood of losing money slim. The portfolio that gives you the most comfort consists primarily of income-oriented asset classes such as cash, nominal and inflation-linked bonds and property. You shy away from too much exposure to equities because of their higher volatility.

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Volatility

Volatility is a measure of 'risk' and refers to the extent to which the price of an investment or capital value fluctuates over a certain period of time. Funds with high volatility usually offer the potential for higher returns over the longer term than low volatility funds.

Cumulative Returns

Cumulative return is the total growth experienced over the period measured.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, biannual or annual distribution pay-outs.

Diversification

This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smoothes out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.

Financial Instruments

Derivatives also known as financial instruments (such as a future, option, or warrants) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).

Fund Objective

The fund objective is the portfolio's core goal.

Fund Strategy

The fund strategy is the way that the fund is managed to achieve the fund objective.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Collective Investment Schemes

Collective Investment Schemes (CIS) (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

Market Capitalization

Market capitalization is the total value of the issued shares of a publicly traded company; it is calculated by multiplying the share price by the number of shares in issue.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Performance Fee

Performance fees are incentive fees earned by the manager for performance in excess of the benchmark.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Portfolio Manager Comment

As at 31 March 2018

As reported in the latest SARB quarterly bulletin, the synchronised global economic recovery continued in the fourth quarter of 2017 as world trade volumes increased significantly, with export volumes in the advanced economies rising sharply. Local economic growth is expected to improve on the back of positive political developments feeding through to a sustained boost in business and consumer confidence. Household consumption expenditure growth is expected to be the main driver of GDP growth in the short to medium term because of positive real wage increases. In the 2018 budget review, National treasury sees real GDP growth rising to 1.5% in 2018 and up to 2.1% in 2020.

Inflation has retreated further, with the latest year-on-year figure declining from 4.4% to 4.0%, slightly below the market's expectation of 4.2%. Inflation pressures remain benign on the back of low food inflation and a steady Rand.

The recent change in national leadership and Ramaphosa's show of intent to stabilise the nation's debt-to-GDP ratio and commitment to boosting growth, was enough to convince Moody's to maintain their investment grade credit rating for South Africa and to adjust their outlook to stable. Against this backdrop, it was no surprise the MPC cut rates by 25bps post the latest Moody's credit review. With real rates at elevated levels, the only hurdle to further rate cuts during 2018 is the bank's growing reluctance to cut the real repo rate below their 2% neutral real rate estimate. This stance reflects the MPC's potential inclination to target inflation expectations closer to the mid-point of the target. Achieving this goal, will be supportive of lower bond yields further out on the curve.

The portfolio positioning over the first month and a half of 2018 was very conservative, characterised by a low modified duration coupled with a 7.5% foreign currency exposure. The aim was to immunise the portfolio against the likely fallout in the event of a potential credit downgrade. Since the ANC's elective conference in December, through to the swearing in of our new president in February, a new mood has swept over the nation, and likewise in the market place, with assets repricing, reflecting a lower risk premium.

It can be argued that in the event of lower inflation and improved credit metrics going forward, our fixed coupon bond market remains under valued (particularly in the long-end). Although cash returns have come down, inflation remains low, which will result in attractive real returns over the short to medium term. Shorter dated inflation linked bonds also offer favourable real yields, however in the event of lower inflation, these assets may underperform fixed bonds over the short to medium term.

As such, the portfolio's modified duration has been increased, coupled with a lift in yield. We continue to look for opportunities to add exposure to high quality floating rate notes, which are delivering attractive real yields. Likewise, we are gradually lifting exposure to inflation-linked bonds at the shorter-end of the curve, which will provide protection in the event of higher inflation.

The main risk to our thesis of stable and contracting local bond yields, is the cycle of rising interest rates in the US. US growth has remained robust, and with rising levels of employment and inflation forming a healthy base, there has been scope for the Fed to raise rates. The path of higher US rates is expected to persist for the next couple of years, which could begin to place upward pressure on local bonds in the event of higher US bond yields.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign instruments which could be accompanied by additional risks as well as potential limitations on the availability of market information. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Northstar Asset Management (Pty) Ltd, (FSP) Licence No. 601, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.
